New glycosylated soluble IL-6 receptor/IL-6 conjugates - used for e.g. treating cancers, bone marrow transplantation, increasing haematopoiesis or treating liver or neurological disorders.

Claim 5; Page 54; 77pp; English.

This sequence represents a linker that can be used in the chimeric glycosylated soluble interleukin-6 receptor (sIL-6R)-interleukin-6 (IL-6) protein (sIL-6R)-interleukin-6 the invention. The SIL-6R/IL-6 protein comprises a fusion protein product between all of the naturally occurring form of sIL-6R and all of the naturally occurring form of independent of the naturally occurring form of IL-6, the sIL-6/IL-6 and analogues being glycosylated in a similar fashion to the glycosylation of naturally occurring sIL-6R and IL-6. The sIL-6R/IL-6 and analogues are capable of inhibiting the growth of highly malignant cancer

                                         The invention describes the use of interleukin-18 (II-18) inhibitor for manufacture of medicament for treatment and/or prevention of diseases or diseased conditions of the arteries, heart failure recurrent events, or as diagnostic marker for bad clinical prognosis in heart failure or recurrent events after first event of heart failure. The II-18 inhibitor is useful for: the manufacture of a medicament for treatment and/or prevention of atherosclerosis/arteriosclerosis/ the manufacture of a medicament for treatment and/or prevention of trombosis of atherosclerotic plaque (AP), AP ulcer, AP destabilisation (responsible for stroke), atheroma, isohaenic syndromes e.g. myocardial infarction, Al disminishment and failure recurrent summits of death recurrent.
disruption or heart failure recurrent events e.g. death, recurrent ischaemia, re-vascularisation and progression of atherosclerosis, the heart failure is ischaemic or non-ischaemic and as a diagnostic
                                                                                                                                                                                                                                                                                    Use of interleukin-18 inhibitor for manufacture of medicament for treatment and/or prevention of atherosclerosis, thrombosis of atherosclerotic plaque, atherosclerotic plaque ulcer and heart failure
                                                                                                                                                                                                                                                   Disclosure; Page 16;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cells, e.g. melanoma cells, eliciting the in vivo engraftment of human haematopoietic cells in bone marrow transplantation and protecting liver from hepatotoxic agents. They can be used for the preparation of a medicament for treating mammalian cancers by way of inhibition of cancer cells, for enhancement of bone marrow transplantation by way of eliciting for increasing haematopoietic cells in bone marrow transplantation, for increasing haematopoiesis, for treating liver or neurological disorders, or in other applications in which IL-6 or sIL-6R are used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Interleukin

CC Infa
The present invention relates to the use of human secreted apoptosis-
CC related protein 1 (SARP-1), SARP-1 nucleic acids and/or a substance which
CC stimulates the release or potentiates the activity of endogenous SARP-1
CC initiates signalling of the human SARP-1 receptor. The SARP-1 protein binds to and
CC initiates signalling of the human SARP-1 receptor. The SARP-1 protein can
CC SARP-1 can be used in gene therapy. And the polymucleotide sequences encoding
CC sequences, and pharmaceutical compositions comprising SARP-1 are useful
CC for the treatment of scleroderma, especially systemic sclerosis. They may
CC interstitial pulmonary fibrosis, Dupuytren's contracture, keloid and
CC reactive fibrosis), chronic heart failure (particularly after myocardial
CC infarction), disorders involving inflammation of the lung (e.g. rheumatoid
CC arthritis). The present sequence represents a linker peptide that can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ន្តន្តន្តន្តន្

                                                                                                               Matches
                                                                                                                                                                                         The invention relates to the use of a substance (I) signaling through gpl30, or use of a vector (II) for inducing and/or enhancing the endogenous production of interleukin-6 (II-6) in a cell. (I), (II) or a cell expressing (I), is useful in the manufacture of a medicament for the treatment and/or prevention of diabetic neuropathy. (I) is useful for treating or preventing diabetic neuropathy such as polyneuropathy or mononneuropathy. The present sequence represents a linker peptide used for

The product of the invention has antiviral, anticancer, immunomodulatory, anti-arthritic and antidiabetic activity. (A) have the antiviral, anticancer and immunomodulating activities of IFN, e.g. for treating hepatitis and other viral infections, hairy cell leukemia, Kaposi's sarcoma, multiple myeloma and other cancers, multiple sclerosis, rheumatoid arthritis, myasthenia gravis, diabetes, acquired immune deficiency syndrome and lupus. When complexed in (A), the storage life of IFN is increased (i.e. it is stabilized against oligomerization, without the need for storage at acidic pH) and its biological effect is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  IFNAR2; IFN-beta; type I interferon; IFNAR/IFN complex; IFN; antiviral; human interferon alpha/beta receptor; anticancer; immunomodulatory; anti-arthritic; antidabetic; treatment; hepatitis; viral infection; hairy cell leukemia; Kaposi's sarcoma; multiple myeloma; cancer; lupus; diabetes; multiple sclerosis; rheumatoid arthritis; myasthenia gravis; acquired immune deficiency syndrome.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes a novel method for prolonging the in vivo effect of type I interferon (IFN) by administering IFN as a complex (A) with a subunit (I) of the human interferon alpha/beta receptor (IFNAR). The product of the invention has antiviral, anticancer, immunomodulatory, anticancer and immunomodulating activities of IFN, e.g. for treating hepatitis and other viral infections, hairy cell leukemia, Kaposi's sarcoma, multiple myeloma and other cancers, multiple sclerosis, rheumatoid arthritis, myasthenia gravis, diabetes, acquired immune deficiency syndrome and lupus. When complexed in (A), the storage life of IFN is increased (i.e. it is stabilized against oligomerization, without the need for storage at acidic pH) and its biological effect is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            diabetes; multiple sclerosis; rheumatoid arthritis; myasthenia gravis; acquired immune deficiency syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure; Page 80; 86pp; English

                                                                                                                                                                                         The invention relates to Pseudomonas aeruginosa polypeptides and the polymucleotides encoding them. The sequences are useful in diagnosis and continuous as molecular targets for diagnostics, therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa mucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, concluding anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa drugs, as templates for recombinant components for diagnosis and/or treatment of P. aeruginosa-caused components for diagnosis and/or treatment of P. aeruginosa-sequences AB667826-CAB084396 represent P. aeruginosa-polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAY36754-Y37949 are encoded by open reading frames (ORFs) of the genome of Chlamydia trachomatis (see AAZ01425). The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma, and inclusion conjunctivitis; genital diseases such as nongonococcal uretritis, epidymitis, cervicitis, salpingitis, perihepatitis, bartholinitis; pneumopathy in breast feeding infants; and venereal lymphogranulomatosis. The polypeptides of the invention may be
                                                                                   The invention relates to a unicellular organism for producing a diterpene or diterpene precursor comprising an exogenous nucleic acid sequence encoding a geranylgeranyl pyrophosphate synthase under the control of a promoter operable in the organism, and an exogenous nucleic acid sequence encoding a diterpene synthase under the control of a promoter operable in the organism. The invention also relates to methods of producing a time organism.
                                                                                                                                                                                                                                                                                                                                                                     New unicellular organisms comprising exogenous nucleic acids encoding geranylgeranyl pyrophosphate and a diterpene synthase, useful for producing diterpenes and diterpene precursors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     07-JAN-2002; 2002US-00041018
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Chlamydia trachomatis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Geranylgeranyl pyrophosphate synthase; diterpene; diterpene precursor; diterpene synthase; defence toxin; volatile defensive signal;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Geranylgeranyl pyrophosphate synthase polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               01-JUL-2004

                                                                              the cells further comprises at least one isolated and purified nucleic card sequence of a yeast expression library, and the expression of the nucleic acid sequence is regulated by an inducible promoter under conditions where the expression is induced, filtering the cell/resin card extracting the cell/resin mixture with alcohol to produce an companic eluent and analysing the organic eluent by a screening method corganic eluent and analysing the organic eluent by a screening method card sequence encoding the diterpene synthase. The unicellular card sequence encoding the diterpene or diterpene precursor producing system. Diterpenes, in plants, serve as defence toxins, volatile confensive signals, pollinator attractants and photoprotectants. This sequence represents a geranylgeranyl pyrophosphate synthase polypeptide of the invention. Note: The sequence data for this patent did not form the printed specification but was obtained in electronic format
Sequence 291 AA;

New isolated protein complexes useful for diagnosing a disease or disorder, or as a target for an active agent of a pharmaceutical, preferably a drug target in the treatment or prevention of diseas of disease ç

SEQ ID NO 1141; 17pp + Sequence Listing; English

The invention relates to multiprotein complexes from eukaryotes. Proteins of the invention and DNA sequences encoding them are given in records ABR52568-ABR53903 and ACC60610-ACC61944 respectively. The complexes are obtainable by using a protein as a bait and isolating the set of proteins which is attached thereto from cells. Such protein complexes may comprise up to 30 distinct proteins. Protein complexes of the invention are useful for diagnosing a disease or disorder, or as a target for an active agent of a pharmaceutical, preferably a drug target in the treatment or prevention of a disease or disorder. Note: The sequence data for this

                                                    hybridize to the nucleic acids encoding the proteins under low stringency conditions. The protein complexes are useful as targets for an active agent of a pharmaceutical. These protein complexes are particularly useful as drugs targets for the treatment or preventing of a disease or disorder. The complexes and methods above are useful in diagnosing or screening for the presence of a disease or disorder or a predisposition for developing a disease or disorder in a subject. These are also useful in screening for a drug for treatment or prevention of a disease or disorder. The molecule that modulates the amount, activity or protein components of the complex is useful for the manufacture of a medicament for the treatment or prevention of a disease or disorder. This sequence corresponds to a protein of the invention. (Note: the sequence data for this patent did not form part of the printed specification but was obtained from the EPO in electronic format).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New proteins and protein complexes from eukaryotes, useful as targets drug screening, or in diagnosing or screening for the presence of a disease or disorder, or a predisposition for developing a disease or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 623

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ş
                                                                                                                                                                                                                                                                         The invention relates to Pseudomonas aeruginosa polypeptides and the polymucleotides encoding them. The sequences are useful in diagnosis and contered therefore the respect for diagnostics, by rophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, conformed the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, concluding anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa drugs, as templates for recombinant components for diagnosis and/or treatment of P. aeruginosa-calerived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caleed components for diagnosis and/or treatment of P. aeruginosa-caleed components for diagnosis and/or treatment of P. aeruginosa-sequences ABO67826-ABO84396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed consideration but was obtained in electronic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                isolating mutants of actinomycetales and for identifying compounds that have antibiotic activity. The method is used to identify mutants of microorganisms, preferably an actinomycetales, such as M. tuberculosis, M. bovis, M. leprae, M. avium, M. intracellulaire and M. paratuberculosis, that is unable to grow under specific conditions. It is especially useful for identifying loci involved in pathogenicity. It is useful in constructing vaccines. The method can be used to screen multiple libraries concurrently. It can screen libraries of different organisms or different strains of the same organism. The present protein is encoded by a gene which is disrupted by the insertion of the IS 1096 transposon to produce an attenuated mutant of Mycobacterium tuberculosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Screening a mutant library for mutants unable to grow under specific conditions and for identifying loci involved in pathogenicity, comprises using signature tagged transposon mutagenesis.
                                                                                                                                                                                                                                                                                                                                                             treating an individual suffering from a mycobacterial infection, suspected of being infected with a Mycobacterium, or having been exposed to an infectious Mycobacterium. It is also useful for identifying and
                                                                                                                                                                                                                                                                                                                                                                                                              library with insertions in genes and/or regulatory regions of the organisms of interest, where the insertion contains a tag and/or a transposon associated with a tag. The mutants are identified by hybridisation of the tags to known sequences. The method is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gicquel B,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              signature tagged transposon mutant; mutant library;

It is encoded by a gene which is down-regulated during survival under carbon starvation and oxygen limitation conditions. The specification describes mycobacterial genes which are down-regulated during a stationary phase culture of mycobacteria under nutrient-starving culture conditions, when compared with an exponential phase culture of mycobacteria under culture conditions that are not nutrient-starving and that support exponential growth of the mycobacteria. Mycobacterial polypeptides which are down-regulated under nutrient-starving conditions are useful for the manufacture of a medicament for treating or preventing a mycobacterial infection. They may also be useful as vaccines

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.

C. P. acnes is also involved in infections of bone, joints and the central corrous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the correct or absence of P. acnes in a patient comprises contacting a compression of a binding agent that binds to the proteins of the invention compression of antibodies conficted and determining the amount of bound protein in the sample. The correction of antibodies specific for P. acnes proteins. These antibodies can be used to compression and activity of P. acnes polypeptides and compression across presence, for example, by constituted immunosorbent assay (ELISA). Note: The sequence data for cobtained in electronic format directly from WIPO at the printed specification, but was constant of the printed specification, but was constant of the printed specification.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                       δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC encoding a Propionibacterium acres polymetrice (ACTev433-ACTEV433) or polymeptides encoded by the polymucleotides (ARM35624-ARM64536) and to CC immunogenic fragments of P. acres polypeptides. The invention also relates to CC immunogenic fragments of p. acres polypeptides. The invention of CC additionally encompasses expression vectors and host cells comprising a CC polymucleotide of the invention; antibodies against polypeptides of the invention; a cell polypeptide of the invention; a comprising a polypeptide of the invention; a cC polypeptide and an isolated T cell population comprising T cells prepared CC via this method; a vaccine composition (comprising P. acres polypeptides, cC polymucleotides, antibodies, fusion proteins, T cell populations, or CC antigen-presenting cells that express the polypeptide); a method and kit for detecting or determining the presence or absence of P. acres in a cC patient; and a method for inhibiting the development of P. acres in a cc patient; and a method for inhibiting the development of P. acres in a cc patient; and a method for inhibiting preventing cells that express the creating. The P. acres polypeptides, polymucleotides, antibodies, fusion proteins. Toell populations or antigen-presenting cells that express the collypeptides are useful for diagnosing, preventing or treating acres collypeptides are useful for diagnosing, preventing or treating acres collypeptides are useful for diagnosing, preventing or treating acres collection. The polymucleotides can also be used as probes or primers for mulation of an immune response against P. acres, or for treating acres, and the kit is useful for prevention. The present sequence can also be used as probes or primers for composition of an immune response against P. acres, or for treating acre, and the kit is useful for prevention. The present sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly composition is patent did not format directly from WiPo at ftp. 
                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC The invention relates to Pseudomonas aeruginosa polypeptides and the CC polynucleotides encoding them. The sequences are useful in diagnosis and CC therapy of pathological conditions, as molecular targets for diagnostics, CC prophylaxis and treatment of pathological conditions resulting from a CC bacterial infection, for evaluating a compound, such as a polypeptide, CC for the ability to bind a P. aeruginosa nucleic acid, as components of CC effective antibacterial targets, as targets for antibacterial drugs, CC including anti-P. aeruginosa drugs, as templates for recombinant CC production of P. aeruginosa-derived peptides or polypeptides, as target CC components for diagnosis and/or treatment of P. aeruginosa-caused CC infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using blochip technology. Sequences ABO67826-CC ABO84396 represent P. aeruginosa polypeptides of the invention. Note: The sequence date for this patent did not form part of the printed CC specification but was obtained in electronic format from USPTO at CC sequence date for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

                                                                                                                                                                                                                                                                                                                                            RESULT 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated polynucleotide (ACF64435-ACF64733) CC encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention CC additionally encompasses expression vectors and host cells comprising a polypucleotide for stimulating an immune response specific for a P. acnes convention; antibodies against polypeptides of the invention; a comprising a polypeptide for a P. acnes convention; a comprising p. acnes polypeptides, antibodies, fusion proteins comprising P. acnes polypeptides, comprising p. acnes in a complex present present of p. acnes in a complex present present of p. acnes in a complex present present of p. acnes in a complex present present present of p. acnes in a comprising, comprising p. acnes in a complex present pre

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB018737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly the sequences of the sequence data for this patent did not format directly are the sequence of the sequence data for this patent did not format directly part of the sequence data for this patent did not format directly part of the sequence data for this patent did not format directly patent did not format directly the sequence data for this patent did not format directly patent did not format directly the sequence data for this patent did not format directly patent did not format directly the sequence data for this patent did not format directly patent did not format directly the sequence data for this patent did not format directly patent did not format directly the sequence data for this patent did not format directly patent did not format directly the sequence data for this patent did not format directly the sequence data for the sequence data for this patent did not format directly the sequence data for the sequence data for this patent did not format directly data for the sequence data for th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated nucleic acid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial encephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Identifying a mitochondrial target for drug screening assays and for treating diseases associated with altered mitochondrial function, comprises detecting a modified polypeptide in a sample and correlating with the disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ghosh SS,
Warnock DE;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ragged red fibre syndrome (MERRF) or cancer. Accordingly, these compositions have neuroprotective, nootropic, anticiabetic, antiartentricine, osteopathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart mitochondrial protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 875 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This

In all, 97 cycoplasmic proteins, secreted proteins or other cellular proteins, vaccines containing the nucleic acids or proteins are called as are probes containing the nucleic acids or proteins are claimed, as are probes containing at least 8 nucleotides from the nucleic acid sequences. The vaccines are useful for treating or reducing the risk of H. pylori infections, and the probes can be used diagnostically for detecting the presence of Helicobacter in a sample. The products are also of use in screening for compounds having the ability to interfere with the H. pylori life cycle or to inhibit H. pylori infection
This sequence represents a Helicobacter pylori GHPO protein of the invention. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroduodenal diseases associated with these infections, including acute, chronic, and atrophic gastritis, and peptic ulcer diseases, e.g. gastric and duodenal ulcers. They can also be used for the production of antibodies. The products can also be used for
                                                                                                                                                                                                                                          New isolated Helicobacter polynucleotides - used to develop products for the diagnosis, prevention and treatment of Helicobacter infections and gastrointestinal diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (INMR)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Recombinant or substantially pure preparations of H. pylori polypeptides are disclosed, together with the nucleic acids encoding them.                                                                                                                                                                                                                                                  The invention relates to a vaccine for preventing or treating infections by Helicobacter pylori. The vaccine contains at least one isolated H. pylori polypeptide, or its fragments, in a carrier, where the carrier is a Salmonella, Vibrio cholerae or Shigella vector containing a nucleic acid encoding the H. pylori polypeptide. The vaccines induce humoral and cellular immune responses. The vaccines are used to treat or prevent infections by H. pylori. Sequences AAX75779 to AAX75837 represent nucleic acid sequences encoding H. pylori outer membrane polypeptides (OMPB)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Outer membrane polypeptide; OMP; vaccine; H. pylori infection; humoral; cellular immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          H. pylori outer membrane polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAY17195;

```
CC of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid

(2) encoding a polypeptide whose expression is inhibited by the antisense

(3) an isolated

(4) an isolated

(5) encloid acid; (5) a host cell containing the vector; (3) an isolated

(6) colypeptide or its fragment whose expression is inhibited by the

(7) antisense nucleic acid; (4) an antibody capable of specifically binding

(8) contisense nucleic acid; (4) an antibody capable of specifically binding

(9) proliferation or the activity of a gene in an operon required for

(1) groliferation; (7) identifying a compound that influences the activity of

(1) identifying a gene required for cellular proliferation or the biological

(2) pathway in which a proliferation or that inhibits cellular proliferation; (8)

(8) crequired for proliferation or that inhibits proliferation of an

(8) crompound's activity; (11) a culture comprising strains in which the gene

(2) compound's activity; (11) a culture comprising strains in which the gene

(3) compound's activity; (11) a culture comprising strains in which the gene

(4) compound's activity; (11) a culture comprising strains in which the gene

(5) compound's activity; (11) a culture comprising strains in which the gene

(6) compound's activity; (11) a culture comprising strains in which the gene

(8) creating; or (13) identifying the target of a compound that inhibits the

(8) creating; or (13) identifying the target of a compound that inhibits the

(9) creating; or (13) identifying the target of a compound that inhibits the

(14) creating protains or screening for homologous nucleic acids required

(15) creating prokaryotic essential genes. Note: The sequence data for this

(16) probaryotic essential genes. Note: The sequence data for this

(17) prohypotic essential genes. Note: The sequence data for this

(18) prohypotic essential genes. Note: The sequence data for this

(18) prohypotic essential genes in the content of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Wang L,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S
                                                                                                                                                                                                                                                                                            The present sequence is the protein sequence of an efflux protein thought to be involved in the biosynthesis of the peptide antibiotic AC98 of CC Streptomyces hygroscopicus NS17 (NRRL 30439). The sequence is predicted CC from an open reading frame (ORP10) in a gene cluster ADE86070 isolated CC complex. Sequence comparisons of specific ORFs indicated that the encoded CC complex. Sequence comparisons of specific ORFs indicated that the encoded CC proteins are tailoring enzymes involved in modification of the AC98 CC peptide core, e.g. glycosylation, methylation or acylation, or in CC resistance. The invention provides a method of producing NRRS using CC transformed host cells. It also provides a method of producing a cyclic CC peptide antibiotic, such as AC98, using the NRPS comprised of mppA CC lipoglycopeptide antibiotic with activity against Gram-positive CC pathogens. Also provided are methods of modifying NRPS to produce an CC antibiotic having a modified peptide core, and a method for evaluating CC antibiotic having a modified peptide core, and a method for evaluating CC the structural regions of the modified peptide.

                                                                                                                                                                                                                                                                                                                                                                           ABR52568-ABR53903 and ACC60610-ACC61944 respectively. The complexes are obtainable by using a protein as a bait and isolating the set of proteins which is attached thereto from cells. Such protein complexes may comprise up to 30 distinct proteins. Protein complexes of the invention are useful for diagnosing a disease or disorder, or as a target for an active agent of a pharmaceutical, preferably a drug target in the treatment or prevention of a disease or disorder. Note: The sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office. The complete document is available on CD-ROM
                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; SEQ ID NO 1301; 17pp + Sequence Listing; English

The proteins are selected from given protein complexes, which are not defined in the specification. The variants are encoded by nucleic acids that conditions. The protein complexes are useful as targets for an active agent of a pharmaceutical. These protein complexes are particularly useful as drugs targets for the treatment or preventing of a disease or disorder. The complexes and methods above are useful in diagnosing or screening for the presence of a disease or disorder or a predisposition for developing a disease or disorder in a subject. These are also useful in screening for a drug for treatment or prevention of a disease or disorder. The molecule that modulates the amount, activity or protein components of the complex is useful for the manufacture of a medicament for the treatment or prevention of a disease or disorder. This sequence corresponds to a protein of the invention. (Note: the sequence data for obtained from the EPO in electronic format).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New proteins and protein complexes from eukaryotes, useful as targets drug screening, or in diagnosing or screening for the presence of a disease or disorder, or a predisposition for developing a disease or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Marzioch M, Grann-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC subject (e.g. cancer) to prevent or contain containation of an object cy A. fumigatus, or to prevent or inhibit formation on a surface of a CC biofilm comprising A. fumigatus. The polynucleotides are useful for CC expressing recombinant protesin for characterisation, screening or CC expressing recombinant protesin for characterisation, screening or CC therapeutic use, as markers for host tissues in which the pathogenic corganisms invade or reside, for comparing with the DNA sequence of A. CC fumigatus to identify duplicated genes or paralogues having the same or sequences of other related or distant pathogenic organisms to identify components of other related or distant pathogenic organisms to identify components of other related or distant pathogenic organisms to identify components for attachment to a nucleic acid array for examination of expression patterns, for raising anti-protein antibodies, as an component of expression patterns, for raising anti-protein antibodies, as an expression patterns, as a reagent in assays designed to quantitatively determine levels of the protein in biological fluids, as a marker for component of the protein of the protein of controls. This sequence represents a protein of one of the essential genes of factors. This sequence represents a protein of one of the essential genes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S

The polynucleotides are useful for C expressing recombinant protein for characterisation, screening or C expressing recombinant protein for characterisation, screening or C corganisms invade or reside, for comparing with the DNA sequence of A. C c funigatus to identify duplicated genes or paralogues having the same or segmences of other related or distant pathogenic organisms to identify sequences of other related or distant pathogenic organisms to identify potential orthologous essential or virulence genes, for selecting and C making oligomers for attachment to a nucleic acid array for examination of expression patterns, for raising anti-protein antibodies, as an C response, and for identifying polynucleotides encoding the other protein with which binding occurs or to identify inhibitors of the binding c interaction. The polypeptides may be used to raise antibodies or to elicit immune response, as a reagent in assays designed to quantitatively determine levels of the protein in biological fluids, as a marker for isolate correlative receptors or ligands in the case or virulence factors. This sequence represents a protein of one of the essential genes of the invertion
                                                                                                                                                                                                                                                                             문
                                                                                                                                                                                                                                                                                                                S

The invention relates to Pseudomonas aeruginosa polypeptides and the CC polynucleotides encoding them. The sequences are useful in diagnosis and CC therapy of pathological conditions, as molecular targets for diagnostics, CC prophylaxis and treatment of pathological conditions resulting from a CC for the ability to bind a P. aeruginosa nucleic acid, as components of CC effective antibacterial targets, as targets for antibacterial drugs, CC including anti-P. aeruginosa drugs, as templates for recombinant CC production of P. aeruginosa-derived peptides or polypeptides, as target for antibacterial drugs, CC infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABO67826-CC ABO84396 represent P. aeruginosa polypeptides of the printed CC sequence data for this patent did not form part of the printed CC sequence data for this patent did not form part of the printed CC sequence data for this patent did not form part of the printed CC sequence data for this patent did not form part of the printed CC sequence data for this patent did not form part of the printed CC sequence data.uspto.gov/sequence.html

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL3051), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Drosophila melanogaster.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        27-SEP-2001.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WO200171042-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated nucleic acid genes from Drosophila and

The identified genes play a during transformation of cells or tissues. The identified genes play a during transformation of cells or tissues. The identified genes play a wall biosynthesis, nitrogen and/ or carbon metabolism or they function as wall biosynthesis, nitrogen and/ or carbon metabolism or they function as transcription factors. This polypeptide sequence is thale crees protein transcription factors, given in an exemplification of the invertice.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Altering plant characteristics, useful for producing plants for enzyme pharmaceutical production comprises modifying in a plant, expression of one or more nucleic acids and/or modifying level or activity of one or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to a novel method for altering one or more plant characteristics. Specifically, it refers to identifying genes that are up characteristics. Specifically, it refers to identifying genes that are up compared to the characteristics of the plants overexpressing the heterodimeric expansion of the product of Arabidopsis and using these sequences to alter plant characteristics accordingly. The present invention describes alter plant characteristics accordingly. The product of growth regulators, generating transgenic plants for the production of growth regulators, thereas the products of the product of the product
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Inze
